Foreword

(i) This document supersedes the Dangerous Goods Emergency Action Code List 2023.

(ii) Duty holders are required to use this document for the application of the appropriate Emergency Action Codes (EACs) under Schedule 1 of the Carriage of Dangerous Goods and Use of Transportable Pressure Equipment Regulations 2009 (CDG 2009), as amended; and of the Carriage of Dangerous Goods and Use of Transportable Pressure Equipment Regulations (Northern Ireland) 2010 (CDG 2010), as amended. These regulations implement the Regulations Concerning the International Carriage of Dangerous Goods by Rail (RID[1]), and the Agreement Concerning the International Carriage of Dangerous Goods by Road (ADR[2]).

(iii) The assignment of emergency action codes and additional personal protection codes at Section 4 of this document is based upon the physical and chemical properties of the particular dangerous goods.

(iv) This document is effective immediately in connection with the use of ADR/RID 2025 Edition and is mandatory from 1 July 2025 and the Emergency Action Code List 2023 should no longer be used from that date.

(v) Sections 4 and 5 of this Document will continue to be revised in line with any changes made to the RID and ADR Agreements (normally every two years), as provided for in domestic regulations.

Section 1

Introduction to the Emergency Action Codes

1.1 Introduction

1.1.1 Emergency Action codes (EACs), also known as Hazchem codes, are for the use of the emergency services in conjunction with Emergency Action Code Cards. EACs indicate to the emergency services actions that may be necessary, during the first few minutes of an incident involving dangerous goods, should the officer in charge of the incident deem it necessary to take immediate actions.

1.1.2 This document shall not be used for the purposes of markings on the orange coloured plate without reference to the Carriage of Dangerous Goods and Use of Transportable Pressure Equipment Regulations 2009 (CDG 2009), as amended; or of the Carriage of Dangerous Goods and Use of Transportable Pressure Equipment Regulations (Northern Ireland) 2010 (CDG 2010), as amended; and ADR/RID. The fact that a United Nations (UN) number and emergency action code (EAC) for a given substance are shown in this document does not necessarily mean they should be used for the marking of road tankers, rail tank wagons or tank containers used for the carriage of that substance. An annotation (1) in the EAC column of Section 4 indicates that it is not applicable to the carriage of dangerous goods under RID or ADR.

1.1.3 This document contains all items listed by the United Nations in their publication "Recommendations on the Transport of Dangerous Goods Model Regulations (twenty third revised edition)" with the exception of substances in UN Class 1, i.e. explosives. EACs are not allocated to radioactive materials and these are annotated (2) in the EAC column of Section 4 of this document.

1.1.4 For internal transport operations in Great Britain and Northern Ireland there are two forms of placarding/plate marking permitted for tank transport and carriage in bulk under CDG 2009 (as amended); or CDG (Northern Ireland) 2010 (as amended). Both of these include the hazard warning diamond and the UN number. Road and Rail vehicles must also display one of two additional identification numbers.

- GB registered road and rail vehicles on domestic journeys must display the Emergency Action (Hazchem) Code
- All other vehicles must display the Hazard Identification Number (HIN) (see paragraphs 4.1.13–4.1.18).

1.1.5 Examples of these two systems are shown below. The requirements are contained in CDG 2009 (as amended); or CDG (Northern Ireland) 2010 (as amended).

1.2 Danger Labels

1.2.1 The following are danger labels that will be shown during the transport of dangerous goods:

CLASS 1 – Explosive substances or articles

Division 1.1, 1.2 and 1.3

Division 1.4

Division 1.5

Division 1.6

CLASS 2 – Gases

Flammable gases

Non-flammable, non-toxic gases

Toxic gases

CLASS 3 – Flammable liquids

CLASS 4.1 – Flammable solids, self-reactive substances and desensitized explosives

CLASS 4.2 – Substances liable to spontaneous combustion

CLASS 4.3 – Substances which, in contact with water, emit flammable gases

CLASS 5.1 – Oxidizing substances

CLASS 5.2 – Organic peroxides

CLASS 6.1 – Toxic substances

CLASS 6.2 – Infectious substances

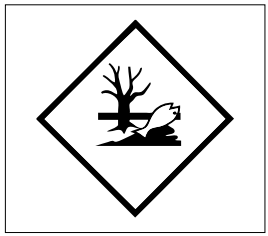
CLASS 7 – Radioactive material

CLASS 8 – Corrosive substance

CLASS 9 – Miscellaneous dangerous substances and articles

Lithium Batteries

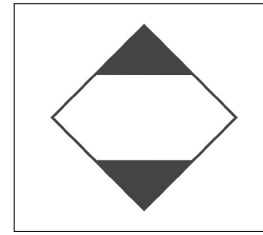
1.2.2 Under the requirements of the 2025 editions of ADR and RID all goods classified as dangerous in carriage, whether or not assigned to another Class, may need to have the EHS mark displayed on their packaging if they meet the EHS criteria contained in 2.2.9.1.10 of ADR and RID.



Environmentally hazardous substance mark

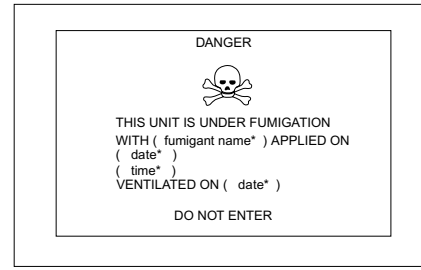
1.2.3 The following are marks that may appear on vehicles during the transport of dangerous goods and would appear in addition to the danger labels at 1.2.1.

Mark for elevated temperature substances



Dangerous goods packed in limited quantities

Risk of Asphyxiation warning sign



Fumigation warning sign

Section 2

Displaying Emergency Action Codes

2.1 Assigning Emergency Action Codes

2.1.1 The codes allocated and shown in the list apply to tank transport and carriage in bulk of the single substance by road or rail except where it is also annotated (1). These codes will not necessarily apply for non-transport incidents although they may be used to provide some indication of the action that may be necessary.

2.1.2 Radioactive materials have not been allocated emergency action codes and are annotated (2).

ADR 5.3.2.1.4 and RID 5.3.2.1.1 and 5.3.2.1.2 stipulate that transport units, containers or wagons carrying packaged radioactive material with a single UN number, required to be carried under exclusive use and with no other dangerous goods, display orange-coloured plates bearing the appropriate hazard identification number (HIN) and UN number.

2.1.3 The prefix '●' will sometimes appear before the EAC in the third column, e.g. UN 1193 Ethyl Methyl Ketone appears as ●2YE. The '●' here indicates to the emergency services that alcohol resistant foam is the preferred firefighting medium but this prefix **shall not** be displayed on plates, i.e. EACs displayed on road or rail vehicles will either be two characters without an 'E' or three characters including an 'E'. In a similar way an APP code will sometimes appear in the 4th column of the List at Section 4 indicating additional information for the emergency services but again this **shall not** be displayed on plates.

2.1.4 In some cases, where there is more than one EAC for a single UN number, it will be necessary to determine the EAC by reference to the packing group, e.g. for UN 1224 – the EAC will be 3YE for ketones of packing group II whereas the EAC will be 3Y for ketones of packing group III. In these cases the relevant packing groups will be identified in the 'Substance' column.

2.2 Assigning Emergency Action Codes to multi-loads

2.2.1 The following procedure shall be used to assign EACs when each of the dangerous goods comprising the multi-load is listed for carriage in a tank under RID or ADR.

1st character of the code

2.2.2 The number forming the first character of the code for a multi-load is the highest of the numbers occurring in the EACs for the individual dangerous goods.

2nd Character of the code

2.2.3 The letter forming the second character of the code shall be determined from the first letter of the EAC for each of the dangerous goods from the chart below.

Code chart for the determination of emergency action codes for multi-loads

	P	R	S	T	W	X	Y	Z
P	P	P	P	P	W	W	W	W
R	P	R	P	R	W	X	W	X
S	P	P	S	S	W	W	Y	Y
T	P	R	S	T	W	X	Y	Z
W	W	W	W	W	W	W	W	W
X	W	X	W	X	W	X	W	X
Y	W	W	Y	Y	W	W	Y	Y
Z	W	X	Y	Z	W	X	Y	Z

2.2.4 If the letter forming the second character of the code for each of the dangerous goods is the same, then that letter will automatically form the second character of the EAC for the multi-load.

2.2.5 If, however, the letter forming the second character of the code for each of the dangerous goods is different, then one of those letters shall be selected along the top of the horizontal line) and then a second letter shall be selected down the far left-hand column, i.e. the two bold sections. The letter in the square where the appropriate column and row meet is the 'resultant letter' for those two substances. If there are only two dangerous goods to be carried in the multi-load, then that resultant letter is the letter forming the second character of the EAC for that multi-load.

2.2.6 If there are more than two dangerous goods to be carried in the multi-load, then use the 'resultant letter' obtained in paragraph 2.2.5 along the top horizontal line as above and select another letter down the far left-hand column as above. The letter in the square where the appropriate column and row meet is the new 'resultant letter'. If there are no more dangerous goods to be carried in the multi-load, then that 'resultant letter' is the letter forming the second character of the code. If there are any further dangerous goods to be carried then this procedure must be repeated until all the other letters have been used.

Letter 'E'

2.2.7 The letter 'E' shall be included as the third character in the multi-load emergency action code if it occurs in the EAC of any of the dangerous goods to be carried. If the letter 'E' does not occur in any of the EACs of the dangerous goods to be carried, the EAC shall be just a two character code determined from paragraphs 2.2.2 to 2.2.6 above.

Example:

2.2.8 The following is an example of how to calculate the emergency action code for a multi-load.

There are three substances to be carried as a multi-load, having emergency action codes of 3Y, 2S and 4WE.

1st Character (number)

The first character of the EAC for each of the three substances is 3, 2 and 4. The highest number must be taken as the first character of the code for the multi-load and therefore the first character shall be **4**.

2nd Character (letter)

The second character for the EAC for each of the three substances is Y, S and W. Taking the Y along the top row of the chart and the S along the left hand column, the intersection is at Y and therefore the character for the first two substances would be Y. This resultant character (Y) is then taken along the top row and the character for the third substance (W) is taken along the left hand column. The intersection point is now W. The second character of the code for the three substances shall therefore be **W**.

Letter 'E'

The third substance has an 'E' as a third character and therefore the multi-load shall also have an '**E**'.

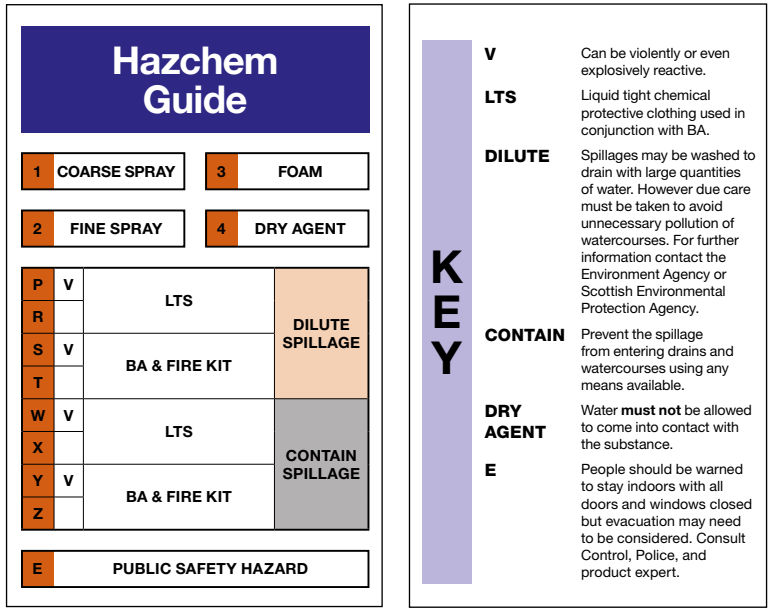
The resultant emergency action code for the three substances carried as a multi-load shall therefore be **4WE**.

Section 3

Application of Emergency Action Codes for the Emergency Services

3.1 Interpretation of Codes

3.1.1 The interpretation of an emergency action code is determined using Emergency Action Code pocket cards, the latest version of which is shown below.



Note: Laminated Emergency Action Code Cards – "Hazchem Scale Cards" – are available from NCEC. Similar cards are also available from TSO (ISBN 978 0 11 341295 2)

Extinguishing Media

3.1.2 The firefighting extinguishing medium is determined by reference to the first character of the EAC as follows:

1 denotes **coarse water spray**

2 denotes **fine water spray**

3 denotes **normal foam** i.e. protein based foam that is not alcohol resistant

4 denotes dry **agent** – water **MUST NOT** be allowed to come into contact with substance

3.1.3 ●2 and ●3, which sometimes appear in the List, are not displayed on the vehicle plates or on the Emergency Action Code Cards and will only be shown as 2 and 3 respectively. This information can therefore only be obtained by reference to this document or another appropriate source, e.g. fire control. ●2 denotes **alcohol resistant foam** but, if not available, fine water spray can be used. ●3 denotes **alcohol resistant foam** but, if not available, normal foam can be used.

Note: Any higher number than the one shown can be used but a lower number must not be used.

Personal Protection

3.1.4 Where the second character of the EAC is S, T, Y or Z normal firefighting clothing is appropriate, i.e. self-contained open circuit positive pressure compressed air breathing apparatus conforming to BS EN 137 worn in combination with fire kit conforming to BS EN 469, firefighters' gloves conforming to BS EN 659 and firefighters' footwear conforming to BS EN 15090 (Footwear for firefighters) type F3 – Hazmat and structural firefighting [CH – marking for chemical resistance] or alternatively firefighters' boots conforming to Home Office Specification A29 (rubber boots) or A30 (leather boots).

Note: Leather footwear, including those conforming to Home Office Specification A30 (leather boots), may not provide adequate chemical resistance therefore caution should be exercised in the use of these boots.

3.1.5 Where the second character of the EAC is P, R, W or X chemical protective clothing with liquid tight connections for whole body (Type 3) conforming to the relevant standards such as BS 8428 or EN 14605, in combination with breathing apparatus specified in paragraph 3.1.4, shall be used.

Violent Reaction

3.1.6 Where the second character of the EAC is a P, S, W or Y there is a danger that the substance can be violently or explosively reactive. This danger may be present due to one of the following:

- Violent or explosive decomposition of the material involved, including ignition or friction.
- The ignition of a flammable gas or vapour cloud (this danger exists for all flammable gases and flammable liquids with a flash point below 60°C).
- The rapid acceleration of combustion due to the involvement of an oxidizer.
- A reaction with water which is itself violent, and may also evolve flammable gases.

3.1.7 The actual danger present can be determined from the vehicle placards or by reference to the United Nations Class in this document or another appropriate source, e.g. fire control.

Contain/Dilute

3.1.8 Where the second character of an EAC is W, X, Y or Z spillages, contaminated fire and decontamination run-off should be prevented from entering drains and surface and groundwaters. Where the second character of the code is P, R, S or T and there is an immediate threat to people, spillages and decontamination run-off may be washed to drains with large quantities of water. In such cases due care must be exercised to avoid unnecessary pollution of surface and groundwaters and wherever possible control measures such as the sealing of drains should be employed. More detailed advice on pollution control techniques and equipment can be found on the 'Environmental Protection' pages of the Published National Operational Guidance Programme (www.ukfrs.com/guidance).

Note 1: It should be noted that pollution offences within environmental legislation do apply to the Fire & Rescue Service. There maybe a defence available to FRS if pollution results from a discharge they made in an emergency, but this defence will only apply if all the criteria set out in the relevant legislation have been met.

Note 2: In recognition of the practical difficulties at incidents, the liaison between the environment agencies and the Fire and Rescue Service has been formalised. These are in the form of a Protocol in England and Wales and in Scotland and Northern Ireland that set out the roles and responsibilities of both parties together with the arrangements that should be followed when dealing with incidents where pollution may occur. These arrangements are detailed on the 'Environmental Protection' pages of the Published National Operational Guidance Programme (www.ukfrs.com/guidance).

Note 3: Ideally most spillages/run off and decontamination run-off should be contained. However, environment agencies accept that life saving will take precedence over environmental protection activities. Nevertheless, all steps that are reasonably practicable should be taken to contain contaminants and the Fire & Rescue Service should always inform the environment Agencies as soon as possible so that appropriate advice can be given. Specific information on the legal position of the Fire & Rescue Services at incidents can be found on the 'Environmental Protection' pages of the Published National Operational Guidance Programme (www.ukfrs.com/guidance).

Note 4: Potentially polluting substances include even apparently harmless substances such as food and beverages, which can cause serious problems if discharged into a water body: e.g. a spillage of a soft drink or beer above domestic quantities can constitute a pollutant as it can lead to deoxygenation of the water. Firefighting foams are also a potential source of pollution and their entry into a drainage system and or ground and surface waters should be prevented whenever possible.

Note 5: Other helpful guidance on environmental issues is available on the 'Environmental Protection' pages of the Published National Operational Guidance Programme (www.ukfrs.com/guidance).

E "Public Safety Hazard"

3.1.9 An 'E' following the first two characters of an EAC indicates that there may be a public safety hazard outside the immediate area of the incident, and that the following actions should be considered:

3.1.10 People should be warned to stay indoors with all doors and windows closed, preferably in rooms upstairs and facing away from the incident. Ignition sources should be eliminated and any ventilation stopped.

3.1.11 Effects may spread beyond the immediate vicinity. All non-essential personnel should be instructed to move at least 250 metres away from the incident.

3.1.12 Police and Fire and Rescue Service incident commanders should consult each other and with a product expert, or with a source of product expertise.

3.1.13 The possible need for subsequent evacuation should be considered, **but it should be remembered that in most cases it will be safer to remain in a building than to evacuate**.

Situations where evacuation may be necessary include the following:

EXAMPLES	ASSESSMENT
1.i. Smoke from product fire which is allowed to burn out. (Often safest and least environmentally damaging option.) **1.ii.** Small/low concentration long lasting toxic emission.	**1.** Nuisance effects will last several hours. Smoke or gas concentrations in open air are unpleasant but short-term exposure is not likely to be dangerous.
2. A larger long lasting toxic gas emission which will be carried towards an inhabited area after a predicted wind change not due for at least two hours.	**2.** Area considered for evacuation will not be exposed to significant danger for at least an hour, preferably longer.
3. Evacuation of people from an isolated house in the country may be feasible, possibly using additional BA sets.	**3.** Downwind area is very sparsely populated and resources are available to protect people during their evacuation.
4.i. Righting a loaded road tanker or rail tank wagon, especially one carrying a liquefied gas. **4.ii.** Recovering or clearing petrol from drains.	**4.** Area considered for evacuation could be exposed to danger as a result of actions necessary to restore normality at a time determined by the recovery team.

Section 4

Numerical List of Dangerous Goods

4.1 Explanation of headings in Numerical List

4.1.1 The headings provided in each column of this Section are defined below:

Column 1: United Nations (UN) Number

4.1.2 The identification number shown in the first column of the list is that allocated by the United Nations and contained in the "Recommendations on the Transport of Dangerous Goods Model Regulations (twenty third revised edition)". These entries can also be found in the Regulations Concerning the International Carriage of Dangerous Goods by Rail [RID](2025) and in the Agreement Concerning the International Carriage Dangerous Goods by Road [ADR] (2025).

4.1.3 Certain United Nations numbers carry more than one entry, each having a differing EAC, e.g. UN. 1866 and UN 1986. In these cases the substances are carried in differing forms whose properties pose different hazards and require separate EACs.

4.1.4 Many United Nations numbers carry the abbreviation 'N.O.S'. This abbreviation denotes 'Not Otherwise Specified'. These numbers are used for substances or articles which do not have a discrete entry in the list of UN numbers and represent the hazard or hazards the substance or article possesses, e.g. UN 2929 'Toxic Liquid, Flammable, Organic, N.O.S'.

4.1.5 The List in this Section is displayed in UN number order. If only the substance name is known, the UN number can be found by reference to the alphabetical list of substances in Section 5.

Column 2: Substance

4.1.6 The names of substances in the second column of the list are by 'Proper Shipping Names'. Where more than one EAC is allocated to a single UN number, the allocation of EAC is identified by the packing group following the 'Proper Shipping Name'.

4.1.7 The alphabetical list of substances in Section 5 indicate the appropriate UN number for that substance. Substances shown in **BOLD CAPITAL TYPE** in this list indicate the 'Proper Shipping Name'. Normal type indicates an alternative name with the appropriate UN number under which the substance will appear in this Section.

Column 3: Emergency Action Code (EAC)

4.1.8 Emergency Action Codes (commonly known as Hazchem codes) are designed to be used by the emergency services in conjunction with Emergency Action Code Cards, which are intended to be carried by emergency service personnel. The cards indicate the action that may be necessary (except additional personal protection (APP) and the use of alcohol resistant foam) during the first few minutes of an incident.

Column 4: Advice on Additional Personal Protection (APP)

4.1.9 These codes appear as A or B in the List.

Note: These codes do not appear on vehicle placards or on the Emergency Action Code Cards. Whenever an APP code is assigned to a substance, further information shall be sought from the appropriate authority who have access to this information, e.g. fire and rescue service control.

4.1.10 **Code letter A:** Indicates that fire kit as specified in paragraph 3.1.4 with gas-tight chemical protective clothing as specified in paragraph 4.1.11 should be worn. The fire kit is intended to protect against one or more of the following additional hazards which are indicated in the List by the appropriate character(s) in brackets, following the 'A', as shown below:

(c) Liquefied gas with a boiling point below -20°C

(fg) Flammable gas

(fl) Flammable liquid

(cf) Liquefied flammable gas with a boiling point below -20°C

(h) The substance may be carried above 100°C

(co) Oxidizing gas with a boiling point below -20°C

(!) The substance may have a particularly deleterious effect on chemical protective clothing

Where a thermal hazard is present [A(c), A(cf), A(co), and A(h)] suitable thermal resistant gloves should be worn, such as those conforming to BS EN511 or BS EN407.

4.1.11 **Code letter B:** The chemical protective clothing should be gas-tight conforming to BS EN 943 part 2 in combination with the breathing apparatus specified in paragraph 3.1.4.

Column 5: Hazards

4.1.12 This is sub-divided to show the primary hazard of the substance, which determines the Class into which the substance is assigned, and, where appropriate, the subsidiary risks. The classifications identified are those adopted by the United Nations Committee of Experts on the Transport of Dangerous Goods and on the Globally Harmonised System of Classification and Labelling of Chemicals, and are as follows:

Class 1 – Explosives (Note: not included in this document)

Class 2.1 – Flammable gases

Class 2.2 – Non-flammable, non-toxic gases

Class 2.3 – Toxic gases

Class 3 – Flammable liquids and desensitised liquid explosives

Class 4.1 – Flammable solids, self-reactive substances and solid desensitised explosives

Class 4.2 – Substances liable to spontaneous combustion

Class 4.3 – Substances which in contact with water emit flammable gases

Class 5.1 – Oxidizing substances

Class 5.2 – Organic peroxides

Class 6.1 – Toxic substances

Class 6.2 – Infectious substances

Class 7 – Radioactive material

Class 8 – Corrosive substances

Class 9 – Miscellaneous dangerous substances and articles

Note: In this column the number following a decimal point always indicates a sub-division of a class.

Column 6: Hazard Identification Number (HIN)

4.1.3 The HIN consists of two or three figures. In general, the figures indicate the following hazards:

2 Emissions of gas due to pressure or to chemical reaction

3 Flammability of liquids (vapours) and gases or self-heating liquids

4 Flammability of solids or self-heating solids

5 Oxidizing (fire-intensifying) effect

6 Toxicity (or risk of infection)

7 Radioactivity

8 Corrosivity

9 Risk of spontaneous, violent reaction

Note: Spontaneous violent reaction within the meaning of figure 9 includes the possibility of the risk of explosion, disintegration and polymerization reaction with the release of considerable heat or flammable and/or toxic gases.

4.1.14 Doubling of a figure indicates an intensification of that particular hazard.

4.1.15 Where the hazard associated with a substance can be adequately indicated by a single figure, this is followed by zero.

4.1.16 The following combinations of figures, however, have a special meaning: 22, 323, 333, 362, 382, 423, 44, 446, 462, 482, 539, 606, 623, 642, 823, 842 90 and 99. See below.

4.1.17 If the letter 'X' prefixes a hazard identification number, this indicates that the substance will react dangerously with water. For these substances, water may only be used with the approval of experts.

4.1.18 The hazard identification numbers have the following meanings:

20	Asphyxiant gas or gas with no subsidiary hazard
22	Refrigerated liquefied gas, Asphyxiant
223	Refrigerated liquefied gas, flammable
225	Refrigerated liquefied gas, oxidizing (fire intensifying)
23	Flammable gas
238	Gas, flammable corrosive
239	Flammable gas, which can spontaneously lead to violent reaction
25	Oxidizing (fire-intensifying) gas
26	Toxic gas
263	Toxic gas, flammable
265	Toxic gas, oxidizing (fire-intensifying)
268	Toxic gas, corrosive
28	Gas, corrosive
30	Flammable liquid (flash-point between 23°C and 60°C, inclusive) or flammable liquid or solid in the molten state with a flash point above 60°C, heated to a temperature equal to or above its flash point, or self-heating liquid
323	Flammable liquid which reacts with water, emitting flammable gases
X323	Flammable liquid which reacts dangerously with water, emitting flammable gases*
33	Highly flammable liquid (flash-point below 23°C)
333	Pyrophoric liquid
X333	Pyrophoric liquid, which reacts dangerously with water*
336	Highly flammable liquid, toxic
338	Highly flammable liquid, corrosive
X338	Highly flammable liquid, corrosive, which reacts dangerously with water*

* Water not to be used except by approval of experts

339	Highly flammable liquid which can spontaneously lead to violent reaction
36	Flammable liquid (flash-point between 23°C and 60°C, inclusive), slightly toxic, or self-heating liquid, toxic
362	Flammable liquid, toxic, which reacts with water, emitting flammable gases
X362	Flammable liquid, toxic, which reacts dangerously with water, emitting flammable gases*
368	Flammable liquid, toxic, corrosive
38	Flammable liquid (flash-point between 23°C and 60°C, inclusive), slightly corrosive or self-heating liquid, corrosive
382	Flammable liquid, corrosive, which reacts with water, emitting flammable gases
X382	Flammable liquid, corrosive, which reacts dangerously with water, emitting flammable gases*
39	Flammable liquid, which can spontaneously lead to violent reaction
40	Flammable solid, or self-reactive substance, or self-heating substance, or polymerising substance
423	Solid which reacts with water, emitting flammable gas, or flammable solid which reacts with water, emitting flammable gases or self-heating solid which reacts with water, emitting flammable gases
X423	Solid which reacts dangerously with water, emitting flammable gases, or flammable solid which reacts dangerously with water, emitting flammable gases, or self-heating solid which reacts dangerously with water, emitting flammable gases*
43	Spontaneously flammable (Pyrophoric) solid
X432	Spontaneously flammable (pyrophoric) solid which reacts dangerously with water, emitting flammable gases*
44	Flammable solid, in the molten state at an elevated temperature
446	Flammable solid, toxic, in the molten state, at an elevated temperature
46	Flammable or self-heating solid, toxic
462	Toxic solid which reacts with water, emitting flammable gases
X462	Solid which reacts dangerously with water, emitting toxic gases*
48	Flammable or self-heating solid, corrosive
482	Corrosive solid which reacts with water, emitting corrosive gases
X482	Solid which reacts dangerously with water, emitting corrosive gases*
50	Oxidizing (fire-intensifying) substance
539	Flammable organic peroxide

* Water not to be used except by approval of experts

55	Strongly oxidizing (fire-intensifying) substance
556	Strongly oxidizing (fire-intensifying) substance, toxic
558	Strongly oxidizing (fire-intensifying) substance, corrosive
559	Strongly oxidizing (fire-intensifying) substance, which can spontaneously lead to violent reaction
56	Oxidizing substance (fire-intensifying), toxic
568	Oxidizing substance (fire-intensifying), toxic, corrosive
58	Oxidizing substance (fire-intensifying), corrosive
59	Oxidizing substance (fire-intensifying) which can spontaneously lead to violent reaction
60	Toxic or slightly toxic substance
606	Infectious substance
623	Toxic liquid, which reacts with water, emitting flammable gases
63	Toxic substance, flammable (flash-point between 23°C and 60°C, inclusive)
638	Toxic substance, flammable (flash-point between 23°C and 60°C, inclusive), corrosive
639	Toxic substance, flammable (flash-point not above 60°C), which can spontaneously lead to violent reaction
64	Toxic solid, flammable or self-heating
642	Toxic solid, which reacts with water, emitting flammable gases
65	Toxic substance, oxidizing (fire-intensifying)
66	Highly toxic substance
663	Highly toxic substance, flammable (flash-point not above 60°C)
664	Highly Toxic substance, flammable or self-heating
665	Highly toxic substance, oxidizing (fire-intensifying)
668	Highly toxic substance, corrosive
X668	Highly toxic substance, corrosive, which reacts dangerously with water*
669	Highly toxic substance which can spontaneously lead to a violent reaction
68	Toxic substance, corrosive
69	Toxic or slightly toxic substance, which can spontaneously lead to violent reaction
70	Radioactive material
